Advanced Technology group is a research organization focusing on research in key areas of aerospace industry such as Air Traffic Management; Communication, Navigation, Surveillance & Control Systems; Embedded Systems; Crew Interface and Avionics.

Applied research opportunities in aerospace industry

for Masters and Doctorate graduates

We are looking for talented Master’s and Doctorate graduates with strong interest in application research and desire to learn about new technologies to join our Precision Guidance team. Being a part of successful international research group you will be working on EU funded aerospace research programs in the area of satellite navigation and its augmentation systems. You would be contributing to the state-of-the-art both single and multi-constellation / multi-frequency receiver applications development for business jets.

If you are about to complete your Master or Doctorate Degree in Electrical Engineering, speak English and have knowledge/experience in one or more of the bellow mentioned area?

- C and C++
- Matlab/Simulink
- Navigation Systems

Then contact us and we will be happy to discuss Honeywell opportunities with you!
