Honeywell Technology Solutions (HTS) dynamically expands its activities in research and development (R&D) centres in Brno, Czech Republic. Established in 2003, this is the largest R&D centre in Europe for Honeywell. Our engineers and scientists develop products and technologies that are linked to our business units: Aerospace, Automation and Controls Solutions and Transportation Systems.

This position is a part of Aerospace group, the world's leading supplier of avionics systems, products and services for commercial and business aircraft as well as for defense and space applications.

Now we are searching for a student for a part-time position (50-60% of full time) of Software Design Engineer of the satellite communication systems for aerospace.

It covers following activities:
- requirements analysis
- test case and test procedure preparation
- HW/SW integration
- test execution of the SW for Satellite Data Unit
- documentation

Requirements:
- Student of Master program in Communication and Information Technology, Computer Science or Computer/Electrical Engineering
- Good written and verbal communication skills in English
- Basic orientation in communication technologies, SW, HW
- Candidate must be able to work independently and willing to work with various internal and global groups

Considered as a plus:
- Experience with Python/C/C++ programming or other scripting language
- Understanding the software development process, software integration, manual and automated testing
